

AVAILABLE SELECTIONS WHEN BOOTING A RECOVERY CD :

- **UPGRADE :** Use this option to upgrade the HMC code to a new version. You must run the 'Save Upgrade data' task immediately before this wizard. Save Upgrade Data stores the current partition profile, HMC user, and HMC configuration data in a portion of your HMC hard drive that the upgrade process cannot erase. HMC automatically recovers the data after the upgrade process completes. (Don't use backup Critical console Data instead of the Save Upgrade data).
 - ✓ UPGRADE from media :
 - ✓ UPGRADE from network : You can provide a static IP address or use one provided by the DHCP server.
- **INSTALL :** Use this option when installing HMC code for the first time. 'Critical Console Data' can be restored at the end of the installation process.
WARNING: The task will destroy any information of the installation process.
- **BACKUP OVER NETWORK:** Use this option to back up the entire HMC to a remote system.
- **RESTORE OVER NETWORK:** Use this option to restore the entire HMC from previously backed up data on a remote system.
WARNING: The task will destroy any information that is currently on the hard disk of the HMC.
